

Managing Data in REDCap

Reports and Data Import/Export

Sui Tsang

REDCap@Yale Team

3/24/2022

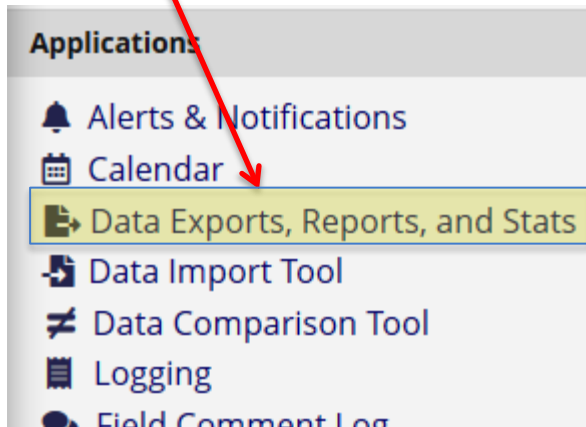

YALE UNIVERSITY
SCHOOL OF
MEDICINE

Introduction and Learning Objective

- Learn how to set up a custom data report in REDCap with filters.
- Understand how to export data to statistical packages.
- Know how to import data to a REDCap project.
- Learn what an API is.

Data Exports, Reports, and Stats

Data Exports, Reports, and Stats

[VIDEO: How to use Data Exports, Reports, and Stats](#)

[+ Create New Report](#)

[My Reports & Exports](#)

[Other Export Options](#)

This module allows you to easily view reports of your data, inspect plots and descriptive statistics of your data, and export your data to Microsoft Excel, SAS, Stata, R, or SPSS for analysis (if you have such privileges). If you wish to export your data as a report, then Report A is the best and quickest way. However, if you want to view or export data from instruments (or events) on the fly, then Report B is the best choice. You may also create your own custom reports (if you have such privileges) in which you can filter the report to specific fields, records, or events using a vast array of filter options. Once you have created a report, you may view it as a webpage, export it out to your preferred format (Excel, SAS, Stata, SPSS, R), or view the plots and descriptive statistics for that report.

My Reports & Exports		
	Report name	View/Export Options
A	All data (all records and fields)	View Report Export Data Stats & Charts
B	Selected instruments and/or events (all records)	Make custom selections
1	Demographics	View Report Export Data Stats & Charts
+ Create New Report

+ Create report based on the selections above																				
B	Selected instruments and/or events (all records)																			

Report A

Good for exporting all data.

If you have a large project with many events and data, you may not be able to open report A.

Report B

Let you pick which instruments, events to include in your report. After you select the instruments and events, you can view the report or create a custom report based on the selections.

How to create custom reports

+ Create New Report

+ User Access: Choose who can edit and view this report

View Access: Choose who sees this report on their left-hand

All users - OR - Custom user access (Choose specif

Edit Access: Choose who can edit, copy, or delete this repo

All users - OR - Custom user access (Choose specif

Fields to include in report Add all fields from selected instrument:

Field 1	Instrument
id "Participant ID code"	

Filters (optional)

Filter 1
Type variable name or field label

Order the Results (optional)

First by
id "Participant ID code" <input type="button" value="AB"/>

+ User Access: Choose who can edit and view this report

View Access: Choose who sees this report on their left-hand project menu ?

All users - OR - **Custom user access** (Choose specific users, roles, or data access groups who will have access)

Edit Access: Choose who can edit, copy, or delete this report (requires user to have 'Add/Edit/Organize Reports' privileges)

All users - OR - **Custom user access** (Choose specific users, roles, or data access groups who will have access)

Set up user access settings

STEP 2

Fields to include in report + Quick Add Add all fields from selected instrument: -- choose instrument --

Field 1	record_id "Record ID" REI Instrument: Recruitment	X
Field 2	-- select a field --	

Additional report options

- Include the survey identifier
- Combine checkbox options to stats packages
- Remove line breaks/characters

STEP 3

Filters (optional)

Filter 1

Switch format: [Use default](#)

Live Filters (optional)

Live Filter 1

Live Filter 2

Recruitment

- record_id "Record ID"
- interested "Are you interested in participating in the study?"
- fname "First Name"
- lname "Last Name"
- email "Email"
- recruitment_complete "Complete?"

Demographic

- age "Age"
- sex "Sex"
- race "Race"
- demographic_complete "Complete?"

Female Survey

- female1 "Female question 1"
- female2 "Female question 2"
- female_survey_complete "Complete?"

Male Survey

- male1 "Male question 1"

How to use filters and AND/OR logic

Operator / Value

Operator: ▼ Value:

Locally filtering data in real time. With the filters you can be used as Live Filters (as well as filters).

Three ways to select fields to include in the report

+ Quick Add

To quickly add or remove fields for this report, check or uncheck their associated checkbox below. The fields will *automatically* be added/removed from the report as you check/uncheck them. The fields will be added to the end of the report as they are checked.

Recruitment (Select All / Deselect All)	
<input checked="" type="checkbox"/>	record_id "Record ID"
<input checked="" type="checkbox"/>	interested "Are you interested in participating in the study?"
<input checked="" type="checkbox"/>	fname "First Name"
<input checked="" type="checkbox"/>	lname "Last Name"
<input checked="" type="checkbox"/>	email "Email"
<input checked="" type="checkbox"/>	recruitment_complete "Complete?"
Demographic (Select All / Deselect All)	
<input checked="" type="checkbox"/>	age "Age"
<input checked="" type="checkbox"/>	sex "Sex"
<input checked="" type="checkbox"/>	race "Race"
<input checked="" type="checkbox"/>	demographic_complete "Complete?"
Female Survey (Select All / Deselect All)	
<input type="checkbox"/>	female1 "Female question 1"
<input type="checkbox"/>	female2 "Female question 2"
<input type="checkbox"/>	female_survey_complete "Complete?"

Total fields selected: **10**

Close

Additional Report Options

Additional report options (optional)

- Include the Data Access Group name for each record (if record is in a group)?
- Include the survey identifier field and survey timestamp field(s)?
- Combine checkbox options into single column of only the checked-off options (will be formatted as a text field when exported to stats packages)
- Display any Missing Data Codes in place of blank values (where applicable)
- Remove line breaks/carriage returns from all text data values (only applicable for CSV Raw and CSV Label data exports)

Report Filters

How to set up report filters – Classic Project

Classic project:

1. Choose the field and specify the operator and value for the first filter.
2. Select And/Or for the next filter
3. Choose field and specify the operator and value for the next filter

STEP 3 [? How to use filters and AND/OR logic](#)

Filters (optional) **Operator / Value**

Filter 1	age "Age" <input type="text"/>	<input type="button" value="RB"/>	< <input type="text"/>	60 <input type="text"/>	<input type="button" value="X"/>
AND <input type="button" value="v"/>					
Filter 2	sex "Sex" <input type="text"/>	<input type="button" value="RB"/>	= <input type="text"/>	Male <input type="text"/>	<input type="button" value="X"/>
AND <input type="button" value="v"/>					
Filter 3	-- select a field -- <input type="text"/>	<input type="button" value="RB"/>	<input type="text"/>	<input type="text"/>	<input type="button" value="X"/>

How to set up report filters – Longitudinal Project

Longitudinal project:

1. Data arranged by events. One row per event.
2. Need to specify the event when setting up filter.
3. Use advanced logic to set up complex filter.

STEP 3

Show data for all events or repeating instruments for each record returned ? [How to use filters and AND/OR logic](#)

Filters (optional) **Operator / Value**

Filter 1	consent_obtained "Signed informed co" <input type="button" value="ABX"/>	=	Yes, signed by subjec	<input type="button" value="X"/>
	in Screening			
AND				
Filter 2	sex "Sex" <input type="button" value="ABX"/>	=	Female	<input type="button" value="X"/>
	in Screening			
AND				
Filter 3	arm "Study arm assignment" <input type="button" value="ABX"/>	=	Acute Intervention	<input type="button" value="X"/>
	in Randomization			
AND				
Filter 4	-- select a field -- <input type="button" value="ABX"/>			
	in All events			

Switch format: [Use advanced logic](#)

TIP: Use [X-instance] Smart Variables to filter repeating data.
• Show only repeating instance data: [current-instance] <> ""
• Show only the first repeating instance: [current-instance] <> "" and [current-instance] = [first-instance]

How to set up report filters – Longitudinal Project

Convert filters to advanced logic format?

If you convert your existing report filters to the advanced logic format, please note that they CANNOT BE CONVERTED BACK TO THEIR ORIGINAL FORMAT afterward as separate fields. Do you still wish to convert to advanced logic format?

Preview of logic after conversion:

```
([screening_arm_1][consent_obtained] = "1") AND  
([screening_arm_1][sex] = "2") AND ([randomization_arm_1][arm]  
= "1")
```

Convert Cancel

Switch format: [Use advanced logic](#) **TIP:** Use [X-instance] Smart V
• Show only repeating instan

STEP 3

Show data for all events or repeating instruments for each record returned ?

Filters (optional)

Advanced filter logic:

(e.g., [age] > 30 and [sex] = "1")

[How do I use special functions?](#)

```
([screening_arm_1][consent_obtained] = "1") AND ([screening_arm_1][sex] = "2") AND ([randomization_arm_1][arm] = "1")
```

How to set up report filters – Longitudinal Project

STEP 3

Show data for all events or repeating instruments for each record returned ?

Record ID record_id	Event Name redcap_event_name	Signed informed consent obtained (patient now enrolled in study) consent_obtained	Sex sex	Ethnicity ethnicity	Race race	Study arm assignment arm	Randomization Date random_date
124 Lname124, Fname124	Screening	Yes, signed by subject (1)	Female (2)	Not Hispanic or Latino (2)	White (5)		
124 Lname124, Fname124	Randomization					Acute Intervention (1)	01-08-2021
124 Lname124, Fname124	6 month						

STEP 3

Show data for all events or repeating instruments for each record returned ?

Record ID record_id	Event Name redcap_event_name	Signed informed consent obtained (patient now enrolled in study) consent_obtained	Sex sex	Ethnicity ethnicity	Race race	Study arm assignment arm	Randomization Date random_date
124 Lname124, Fname124	Screening	Yes, signed by subject (1)	Female (2)	Not Hispanic or Latino (2)	White (5)		
124 Lname124, Fname124	Randomization					Acute Intervention (1)	01-08-2021

How to set up report filters – Repeating form

Repeating form:

1. Use [X-instance] Smart Variables to filter repeating data
2. Show only repeating instance data: [current-instance] <> ""
3. Show only the first repeating instance: [current-instance] <> ""
and [current-instance] = [first-instance]

Example: Include only last instance of call log in the report

STEP 3

Show data for all events or repeating instruments for each record returned ?

Filters (optional)

Advanced filter logic: (e.g., [age] > 18)

[current-instance]=[last-instance] and [current-instance]<> ""

How to set up report filters – Repeating form

Filter=[current-instance]=[last-instance]

Study ID study_id	Event Name redcap_event_name	Repeat Instrument redcap_repeat_instrument	Repeat Instance redcap_repeat_instance	Date call_date	Time call_time	Day of Week call_day_week	Contact Method call_method
1	Baseline						
1	M1						
2	Baseline						
2	Baseline	Baseline Call Log	6	03-05-2021		Friday (5)	
3	Baseline						
4	Baseline						
5	Baseline						

Filter=[current-instance]=[last-instance] and [current-instance]<> ""

Study ID study_id	Event Name redcap_event_name	Repeat Instrument redcap_repeat_instrument	Repeat Instance redcap_repeat_instance	Date call_date	Time call_time	Day of Week call_day_week	Contact Method call_method
2	Baseline	Baseline Call Log	6	03-05-2021		Friday (5)	
7	Baseline	Baseline Call Log	1				Phone call (1)
10	Baseline	Baseline Call Log	2				
11	Baseline	Baseline Call Log	5	03-04-2021		Thursday (4)	Phone call (1)
12	Baseline	Baseline Call Log	4	03-02-2021		Tuesday (2)	Phone call (1)
13	Baseline	Baseline Call Log	1				Phone call (1)

Live Filters

- Dynamically filtering data in real time
- Fields that can be used for live filters: record id, multiple choice fields, events or data access group.

⚡ Live Filters (optional)		Live exc Eve
Live Filter 1	[Events] ▼	
Live Filter 2	-- select a field -- ▼	
Live Filter 3	-- select a field -- ▼	

Live Filters

Data Export

Data Export

- Data can be exported to Excel, SAS, R, SPSS, STATA, XML.
- Options to remove identifiers from data export.

Select your export settings, which includes the export format (Excel/CSV, SAS, SPSS, R, Stata) and if you wish to perform de-identification on the data set.

Choose export format

-  CSV / Microsoft Excel (raw data)
-  CSV / Microsoft Excel (labels)
-  SPSS Statistical Software
-  SAS Statistical Software
-  R Statistical Software
-  Stata Statistical Software
-  CDISC ODM (XML)

De-identification options (optional)

The options below allow you to limit the amount of sensitive information that you are exporting out of the project. Check all that apply.

Known identifiers:

- Remove all tagged Identifier fields (tagged in Data Dictionary)
- Hash the Record ID field (converts record name to an unrecognizable value)

Free-form text:

- Remove unvalidated Text fields (i.e. Text fields other than dates, numbers, etc.)
- Remove Notes/Essay box fields

Date and datetime fields:

- Remove all date and datetime fields
- OR —
- Shift all dates by value between 0 and 364 days (shifted amount determined by algorithm for each record) [What is date shifting?](#)
 - Also shift all survey completion timestamps by value between 0 and 364 days (shifted amount determined by algorithm for each record)

[Deselect all options](#)

Apply live filters?

One or more live filters have been selected on this report. Do you wish to apply the live filters to the data export, thus producing the same data set that you currently see displayed on the report?

Apply live filters selected on this report

Advanced data formatting options

Set CSV delimiter character
Set the delimiter used to separate values in the CSV data file (only valid for CSV Raw Data and CSV Labels export formats):

Force all numbers into a specified decimal format?
You may choose to force all data values containing a decimal to have a specified decimal character (comma or period/full stop). This will be applied to all calculations and number-validated text values in the export file.

NOTE: Your data formatting selections above will be remembered in the future and will be pre-selected upon your next export.

Exporting data to statistical program

SAS Statistical Software

Download and save both files on the right to a common location. Double-click the syntax file to open it in SAS. In the syntax editor in SAS, enter the full path of the data CSV file on your computer into the second line of the .sas syntax file. For example, you will need to add something similar to the red text seen below. Your file name and folder path will look different from the example below. Once you have completed these steps, choose Run (or Run-->Submit) from the top menu options in SAS to load the data.

```
%let csv_file = 'MyProject_DATA_NOHDRS.csv';
```

The code above should be changed to something like the following:

```
%let csv_file = '/Users/JoeUser/Documents/MyProject_DATA_NOHDRS.csv';
```

OR

```
%let csv_file = 'C:\Users\JoeUser\Desktop\MyProject_DATA_NOHDRS.csv';
```

Click icon(s) to download:

[Send file?](#)

- When exporting data to statistical program, REDCap will generate a syntax file and a CSV data file
- Download and save both files to a common location.
- Follow the instructions on the data export page to add the location of the CSV data file to the syntax file
- Run the code to import the data to the statistical program

QUESTIONS?

Data Import

Data Import Tool

This module may be used for importing data into this project from a CSV (comma delimited) file or alternatively from an XML file in CDISC ODM format. Below are the steps you will need to follow in order to import your data successfully into this project.

 CSV import

 CDISC ODM (XML) import

Instructions:

1.) Click the link below to download your data import template as a CSV (comma delimited) file. Save it locally to your computer and then open it to begin filling it with the data you wish to import.

 [Download your Data Import Template](#) (with records in rows)

OR

 [Download your Data Import Template](#) (with records in columns)

2.) In each column of the Data Import Template file that you downloaded, place the data for each record that you wish to import. Once all your data has been added, save the file.

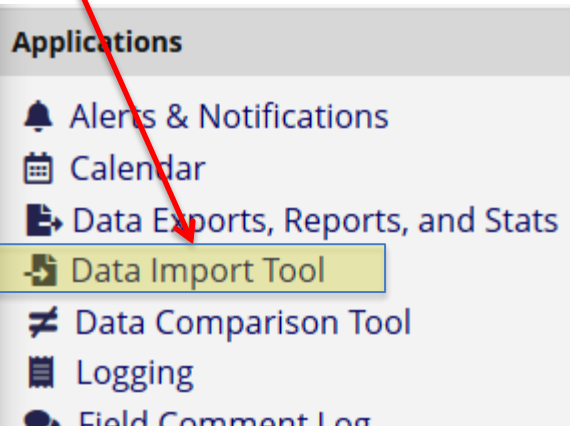

- Be sure not to change the Variables/Field Names in the file or an error may occur.
- All multiple choice fields (e.g., dropdown, radio) must have the raw coded value (rather than the choice label) entered in those cells, or else it cannot be processed. These can be found in the [Codebook](#).
- Any empty rows or columns in the file can be safely deleted before importing the file. Doing this reduces the upload processing time, especially for large projects.

3.) Click the 'Browse' or 'Choose File' button below to select the file on your computer, and upload it by clicking the 'Upload File' button.

4.) Once your file has been uploaded, the data will NOT be immediately imported but will be displayed and checked for errors to ensure that all the data is in correct format before it is finally imported into the project.

How to import records for events:

In order to import records for longitudinal projects such as this one, you must use the '**redcap_event_name**' field in your data import file, in which you will provide a **unique event name** for each record. This will tell it which event that the data belongs to for that record. A list of all the unique names are listed on the [Define My Events](#) page. If the 'redcap_event_name' field is not specified for every record being imported, it will display an error.

How to import data to project

- On the data import page, follow the instructions to download the data import template.
- Place the data for each record that you wish to import in the data import template. Once all your data has been added, save the file.
- All multiple-choice fields (e.g., dropdown, radio) must have the raw coded value (rather than the choice label)
- Delete any empty columns or rows to save processing time
- Follow the instructions to upload the file.
- Once the file is uploaded, the data will be displayed and checked for errors before it is imported

Data Import for Longitudinal Projects

- Longitudinal project
 - Must include 'redcap_event_name' field in your data import file. A list of unique event names can be found on the define my event page.
 - redcap_event_name can be found on the 'Define My Events' page

	Event #	Days Offset	Offset Range Min / Max	Event Name	Custom Event Label (optional)	Unique event name (auto-generated)
 	1	1	-0/+0	Event 1		event_1_arm_1
 	2	2	-0/+0	Event 2		event_2_arm_1
 	3	3	-0/+0	Event3		event3_arm_1

	A	B	C	D	E	F	G
1	record_id	redcap_event_name	age	screening_sex	race	test_date1	test_form_complete
2	5	event_1_arm_1	50	2	5	3/18/2020	2

Data Import for Repeating Form

- Repeating form
 - Must include 'redcap_repeat_instrument' and 'redcap_repeat_instance' fields in the import file. Repeat instrument name can be found in the codebook and the repeat instance is the instance number of your data.

Codebook:

#	Variable / Field Name	Field Label <i>Field Note</i>
Instrument: Test form (test_form)		
	1 record_id	Record ID

CSV file to be imported:

	A	B	C	D	E	F	G	H	I
	record_id	redcap_event_name	redcap_repeat_instrument	redcap_repeat_instance	age	screening_sex	race	test_date1	test_form_complete
1									
2	1	event_1_arm_1	test_form	2	50	2	5	3/18/2020	2

Data Import for Repeating Form

- If importing repeating instances for a repeating event or repeating instrument, you may auto-number the instances by providing a value of 'new' for the 'redcap_repeat_instance' field in the dataset you are importing.
 - This is useful because it allows you to import such data without the need to determine how many instances already exist for a given repeating event/instance prior to the import.

Data Import for Data Access Group

- Data Access Group

- When importing new record, you can assign data access groups to your records. Include the **'redcap_data_access_group'** field with your data import. A list of data access group names can be found on the data access group page.

Data Access Groups	Users in group	Number of records in group	Unique group name (auto-generated)	Group ID number	Delete group?
test1		1	test1	2292	✗
test2		1	test2	2293	✗

	A	B	C	D	E	F	G	H
1	record_id	redcap_event_name	redcap_data_access_group	age	screening_sex	race	test_date1	test_form_complete
2	2292-1	event_1_arm_1	test1	50	2	5	3/18/2020	2

QUESTIONS?

REDCap API

- 'API' stands for 'Application Programming Interface'
- REDCap API is an interface that allows external applications to connect to REDCap remotely
- Can be used for automated data imports/exports from a specified REDCap project
- API Token
 - Rather than using username/passwords, the REDCap API uses tokens as a means of secure authentication.
 - A token must be included in every API request.
 - Each user will have a different token for each REDCap project to which they have access.
 - Enable API Export/Import rights before requesting API token.

API Playground

- An interface that allows experimentation with the REDCap API without writing code.
- You can explore all the different API methods and their various options to customize a given API request
- You may even execute a real API request and see the exact response that REDCap returns from the request
- Example codes can be downloaded from API documentation page

Other Export Options

- Export entire project as REDCap XML file (containing metadata & data)
- ZIP file of uploaded files (all records)
- PDF of data collection instruments containing saved data (all records)

Below are some additional export options that are available for your project. Instructions for each type of export are provided. You may click the corresponding icon on the right to download the file for each.

Export entire project as REDCap XML file (containing metadata & data)

The entire project (all records, events, arms, instruments, fields, and project attributes) can be downloaded as a single XML file, which is in CDISC ODM format (ODM version 1.3.1). This XML file can be used to create a clone of the project (including its data, optionally) on this REDCap server or on another REDCap server (it can be uploaded on the Create New Project page). Because it is in CDISC ODM format, it can also be used to import the project into another ODM-compatible system.

ZIP file of uploaded files (all records)

Uploaded files for all records in this project may be downloaded in a single ZIP file. This file contains any files uploaded for 'File Upload' fields/questions on a survey or data entry form. The ZIP file will contain a folder of all the files organized by record name and variable/field name and also contains an index.html file that serves as a table of contents for all the files. After downloading the ZIP file, extract all the files/folders to a directory on your local computer, after which you may double-click the index.html file inside to view a listing of the files using your web browser, or you may view the files directly by looking in the 'documents' folder. Click the icon to the right to begin downloading the ZIP file.

Note: If your project has a large amount of 'File Upload' fields/questions or records/responses, the resulting ZIP file may be very large in file size. Please be patient if the file takes time to download.

PDF of data collection instruments containing saved data (all records)

The data for all records in this project may be downloaded in a single PDF file. This file contains the actual page format as you would see it on the data entry page or survey and includes all data for all records for all data collection instruments. Click the icon to the right to begin downloading the file. Also, you may optionally click the Compact option to download a PDF that excludes fields that have no data saved and excludes unselected multiple choice options. (Note: Section headers and descriptive fields will still be included.)

Note: If your project has a large amount of fields/questions or records/responses, the resulting PDF file may be very large both in file size and in page length. Please be patient if the file takes time to
